

3rd party app - List of tested applications

3rd party applications can be easily installed to 2N® Indoor Touch from the microSD card, however there are some restrictions and requirements to be met. An additional license is needed as well. For further details see please [this FAQ](#) before you continue with an installation of any application.

The applications listed below have been tested on 2N® Indoor Touch by 2N TechSupport.

Home automation & control apps:

WhatsApp - versions 2.12.250, 2.16.310 ✓, 2.12.489 ⚠ incompatible
Product page <https://www.whatsapp.com>

Testing scenario

- Installation of the .apk file from a microSD card
- Placing of the application's quick launch button on the launcher (home screen)
- Launching of the application by clicking on the quick launch button
- Verification of running the app in the landscape view mode with no distortion/deformation
- Responsivity testing of the control elements (buttons, icons)

Performance

Please note that the performance of an active application might be affected by other applications already running in the background. If you meet any unusual behaviour such as for ex. slow responses or stability issues, feel free to click on the squares icon in the control bar and close other currently launched applications.
